

Anna Chang

1. CSS Animation –

I included two CSS animations: a simple up-down motion for the shutter button and a tilt for my photo on the “about me” page. It makes the page more engaging, especially since the shutter button acts as the transition from one page to another.

2. Carousel –

The carousel acts as the main component of my site by presenting images in an interactive way. The autoscroll allows for more content to be seen while maintaining the minimalistic format.

3. Pseudoselector –

Tags are highlighted in the accented teal color when hovered over by the mouse. This adds PIZZAZZ and emphasizes the accent color.
